

Our multidisciplinary team

Our medical and administrative staff work together to monitor and support all aspects of living with a bleeding disorder so that our patients and families receive the best care possible. Our care model emphasizes interdisciplinary care, with patient and family participation. Children and adolescents with hemophilia and related bleeding disorders are seen at Boston Children's Hospital. Adult patients are seen at Brigham and Women's Faulkner Hospital in Jamaica Plain. Frequent clinics are held for patient convenience. Clinic teams include experts from hematology, nursing, social work and physical therapy. Specialists from other areas such as genetics, orthopedics, dentistry and infectious disease are available for referral and consultation.

Why choose us?

We are the largest federally supported Hemophilia Treatment Center in New England.

Our multidisciplinary care model ensures every aspect of each patient's wellness is monitored by experienced providers.

Our staff offers age-specific education, evaluation and outreach based on the individual needs of each patient and family.

Expert care is available 24 hours a day, 7 days a week.

We offer a seamless transition from pediatric care to adult care.

Comprehensive Clinical Program

Our center

The Boston Hemophilia Center is a combined program of Brigham and Women's Hospital and Boston Children's Hospital. As the largest Hemophilia Treatment Center (HTC) in New England, we care for more than 400 adults and children with congenital bleeding disorders.

Our services

We offer treatment for patients with hemophilia A and B, von Willebrand Disease, platelet disorders, rare factor deficiencies, and thrombotic disorders. Patients are offered integrated, multidisciplinary outpatient and hospital services.

Comprehensive medical evaluation and treatment

Our model of patient care is designed to provide integrated, multidisciplinary care to patients of all ages and their families. By emphasizing early diagnosis and intervention to prevent disease complications, our specialists create a positive impact on the health, life-style and long-term well-being of people with bleeding and clotting disorders.

Ongoing medical management

We have a dedicated team of care specialists who serve as a helpful resource during and between clinic visits. Hematology experts are available to answer your questions 24 hours a day, seven days a week.

Counseling and support

Our social workers are professionals who provide emotional counseling, financial assistance, school and work advocacy, crisis intervention and referrals to pertinent community resources. In-person and tele-interpreters are available in many languages for non-English speaking families.

Genetic counseling and testing

Consultations to determine the genetic cause of a bleeding disorder within families and future implications of genetic traits are available to our patients and families.

Access to new treatment approaches through clinical research

Investigators at Brigham and Women's Hospital and Boston Children's Hospital participate in clinical trials to improve treatment for bleeding disorders.

Factor program

Our Factor Program was established as an independent, non-profit factor delivery service in 1999. Our dedicated pharmacy staff work with your clinical team to integrate cost-effective pharmacy services with your medical care. If you choose to participate in our program, our staff can guide you through the ordering process and insurance billing procedures in order to deliver your factor products and supplies, with an emphasis on personalized service. All factor program income financially supports the Hemophilia Treatment Center.
